METHOD

Method, sources and disclaimer

Scope. For each product line (CN code, origin, destination market) this report lists the steel safeguard tariff quota that applies, its current balance and an indicative run-out estimate, the out-of-quota duty, and where to check anti-dumping and countervailing duties and upcoming changes. Report date 15 October 2026.

EU quotas. The CN code is matched to the product categories in Implementing Regulation (EU) 2026/1457, Annex I. Balances, usage and run-out estimates come from Loharo's Steel Trade Measures Tracker, which reads the European Commission's weekly tariff-quota report. Country-specific quota first; otherwise the residual "Other countries" quota.

UK quotas. Matched by 4-digit heading and origin in Loharo's tracker, which reads the UK Department for Business and Trade quota balances (HMRC, Open Government Licence v3.0).

Canada. Balances are shown on Loharo's tracker page but are not read by this report; Canada lines are marked for manual check with the official sources.

Run-out estimates are Loharo projections from recent draw-down pace, shown with a range, and are indicative only.

Anti-dumping and countervailing duties are not part of Loharo's tracker data and are always marked for manual check with the official source.
